Technical Skills

Programming Languages: Java 17, JavaScript (ES6+), Python, C++, SQL, HTML5, CSS3

Frameworks & Libraries: Spring Boot 3.x, Microservices, JWT/OAuth2, ReactJS, Node.js

Competitions: • Participated in LTTS Hackathon 2026, collaborating with a cross-functional team

Tools & Testing: Git, JIRA, Kafka, Postman, IntelliJ IDEA, VS Code, JUnit 5, Mockito

Experience

Backend Engineer, (*Larsen & Toubro Technology Services (LTTS)*) **Pune MH / Bengaluru KA** **Dec 2024 – Present**

- Designed and developed **8+ production-grade RESTful microservices** for the **Calix SmartCloud platform** using **Java 17, Spring Boot 3.x**, and **Spring MVC**, following a layered architecture (Controller → Service → Repository) to support scalable telecom cloud services.
- Optimized** complex database queries using Spring Data JPA, Hibernate, and Fetch Join, reducing unnecessary database calls and improving API response performance.
- Secured REST APIs using **Spring Security 6, JWT Authentication**, and **OAuth2 Resource Server**, enforcing Role-Based Access Control (RBAC) through method-level security annotations.
- Designed comprehensive unit and integration tests using **JUnit 5 and Mockito**, achieving over 80% code coverage, while documenting REST APIs using Swagger/OpenAPI and validating endpoints with Postman.
- Integrated Apache Kafka** for asynchronous communication across **3** core microservices, enabling reliable event-driven processing and fault-tolerant message delivery.
- Built Prometheus and Grafana** dashboards to monitor API latency, JVM health, and Kafka consumer metrics, enabling faster production issue identification.
- Engineered reusable DTOs, validation layers, and **MapStruct** mappers to standardize data transformation and validation across Spring Boot REST APIs.
- Participated in **code reviews, refactoring initiatives, and SonarQube** quality improvements to ensure adherence to clean code principles and secure coding practices.

Full Stack Developer, (*Seligent Consulting Private Limited*)

Pune, MH **Jun 2024 – Dec 2024**

- Architected and delivered** a full-stack **Manufacturing Operations Tracking Platform** for **Kone** (global elevator & escalator manufacturer) using Java 17, Spring Boot 3.x, and React.js + TypeScript, replacing a legacy Excel-based workflow and reducing equipment lifecycle reporting time by **~45%**.
- Implemented **Spring Security** with JWT authentication, OAuth2, and role-based access control (RBAC) to secure application endpoints and user access.
- Built** reusable frontend components using **React.js, TypeScript, Redux Toolkit**, and **Material UI**, improving application consistency and maintainability.
- Worked closely with product owners, QA engineers, and designers in an **Agile/Scrum** environment to deliver production features and resolve critical issues.

Projects

Microservices E-Commerce Backend [\[link\]](#)

Java 17, Spring Boot 3.x, Spring Cloud, Docker, PostgreSQL, GCP

- Built a distributed e-commerce backend using Java 17, Spring Boot 3.x, Spring Cloud, Docker, PostgreSQL, MongoDB, and GCP following a microservices architecture.
- Created secure REST APIs with JWT authentication, integrated Redis caching to reduce authentication overhead by 50%, and containerized services using Docker for scalable deployment.

Full-Stack Employee Management System [\[link\]](#)

ReactJS, Spring Boot, MySQL, Spring Security, JWT

- Developed a role-based HR platform using ReactJS, Spring Boot, JWT, and MySQL featuring attendance, payroll, and leave management workflows.
- Integrated JWT-based authentication with Spring Security and an end-to-end leave approval workflow, real-time attendance tracking, and payroll management.

Education

B.E – Computer Engineering (*D.Y. Patil Institute Of Technology, Pimpri, Pune*)

CGPA: 9.39/10 **2020 – 2024**

Certifications & Achievements

- Google Generative AI Leader Certification
- Google Cloud Digital Leader Certification
